Pre-Pair It is a knowledge base aggregation system.

Browse through the various categories and stay up to date on the latest concepts and information through a simple Q & A system.

Submit your own Question / Answer pairs, suggest new categories and topics, suggest corrections and updates to the answers to questions.

Take a tour

Pre-Pair It is a mentoring system.

Each category has assigned mentors. The mentors publish topics with questions and answers.

Choose a category and get paired with a mentor. Get guidance from the mentor, learn a technology by reading and practising the assignments, take tests and get assessed.

[VIEW ANSWER](#) Ruby

Inheritance

What is the difference between calling super and calling super()?

Created

4 hours

Difficulty

Mentors

Super

Interview

[HIDE ANSWER](#)

A call to super invokes the parent method with the same arguments that were passed to the child method. An error will therefore occur if the arguments passed to the child method don't match what the parent is expecting.

A call to super() invokes the parent method without any arguments, as presumably expected. As always, being explicit in your code is a good thing.
